

CRM Data Standards

V1.0 · HOW WE KEEP THE DIALER TRUSTWORTHY

Why this matters: a CRM is only as good as the data going in. If everyone marks statuses inconsistently, the pipeline view becomes noise and we make bad decisions about who to call back when. This doc is the contract — every team member follows it the same way.

When to use each Outreach status

STATUS	USE WHEN	DON'T USE WHEN
Spoke	You had a real conversation — even brief — with the decision-maker or someone who can take a message reliably	You only spoke to a receptionist who said "he's not here." That's still LVM territory or no status.
LVM	You left a voicemail. One LVM per number, ever. (See Voicemail Script for follow-up rhythm.)	The phone rang and rolled over without giving you a chance to leave a message. That's no status — try again.
Texted	You sent an SMS to a published business number using the Text Follow-up Template	You texted a number scraped from a residential context. Don't text those — call.
Emailed	You sent the Email Follow-up template (or a real customized response) to a published business email	You sent a contact form on their website. Mark Spoke + a note instead.
Direct Mailed	You actually sent physical mail (letter, postcard, brochure)	You "thought about it" or planned to. Mark only when the envelope is in the mailbox.

When to use each Pipeline stage

STAGE	DEFINITION
Qualified	They booked a discovery call OR explicitly asked for more information. Future revenue is plausible.
Customer	They signed up. Money has changed hands or a contract is countersigned. Not "they said yes" — they paid.
Lost	They explicitly said no, the deal stalled past 60 days with no response, or they went with a competitor. Always log a reason in the contact's notes.

Outreach vs. Pipeline: these are two different axes. A lead can be Spoke (outreach) AND Qualified (pipeline) simultaneously — but the dialer only stores one status field, so the more advanced one wins. Pipeline stages override outreach methods. The system handles this for you when you click the buttons in order.

When to mark Do Not Call

1. Anyone who explicitly asks to be removed from the list — same call, no exceptions
2. Wrong numbers (so we don't redial)
3. Confirmed business closures
4. Anyone the team flags as a TCPA litigator (use the "Litigator / TCPA risk" reason)

The DNC list is a one-way street. Once a number is on it, the only way it comes off is if the lead themselves contacts us asking to be reactivated, and we document that explicitly. Default behavior: stay on the list forever. (See TCPA Compliance & DNC Policy doc.)

Notes hygiene

Every meaningful interaction gets a one-line note in the contact record. The format:

FORMAT	[YYYY-MM-DD HH:MM] [Channel] — [What happened] — [Next step]
EX 1	2026-05-08 14:32 · Call · Owner Maria interested, kids run shop, asked for quote — Follow up Tue 5/13 with mockup
EX 2	2026-05-08 09:15 · LVM · Standard voicemail left, sent email — Day 7 text reminder
EX 3	2026-05-08 11:40 · Call · "Take me off your list" — DNC, asked to be removed

Your future self thanks you. Notes are the difference between "wait, who is this?" and "I remember exactly where we left off." When a callback comes in two months later, the note saves the relationship.

Status timing & cleanup

- ☐ Update status *during* the call, not after — we forget by the next call
- ☐ Pipeline review every Friday — anyone Qualified for 30+ days without movement gets re-engaged or moved to Lost
- ☐ Customers from 6+ months ago get a check-in call quarterly — they're our best referral source
- ☐ Lost leads from 9+ months ago can be cleared from the active list (the lead never deletes — it just exits the active funnel view)

What good looks like

A healthy week in the dialer:

- Every active contact has at least one note from the last 30 days
- Every status reflects the actual most-recent interaction
- The DNC list grew by 3–8 entries (proves we're calling, not just clicking)
- Pipeline view shows movement: things going from Spoke → Qualified → Customer over weeks, not stuck
- "Lost" entries have reasons in the notes — patterns become visible
