Sales Script — Handymen

V1.0 · FOR PA-REGION HANDYMAN & HOME-REPAIR CONTRACTORS

Why this market

Handyman is the most fragmented trade in our pipeline — most operators are 1–3 person shops doing small jobs (\$150–\$2,000) where job velocity matters more than ticket size. Two pain points: **(1)** they're competing against TaskRabbit / Thumbtack / Angi which take 15–30% per lead, and **(2)** they have no website to capture the customer who already loves them and would refer friends.

15–30%

platform fee per lead on Thumbtack / Angi / TaskRabbit

\$300+

average ticket — 5–10 jobs/week is the volume target

1. Pre-call research

- ☐ Are they a one-person op or a small crew? Different pitch.
- ☐ Google "handyman [their city]" — do they rank?
- ☐ Are they on Thumbtack / Angi / TaskRabbit? (Almost always.)
- ☐ License — PA requires HICPA registration for jobs over \$5K. Verify if they're licensed.

2. Opening

Required identification (TCPA): the first thing out of your mouth on every call must be your name, that you are calling from NEPA-PRO LLC, and the purpose of the call. Failure to identify violates federal law.

YOU

"Hi, this is **[your first name]** from **NEPA-PRO** — we're a veteran-owned shop in Clarks Summit. I'm calling because we built a website platform specifically for handymen and small home-repair contractors in PA. Quick question: are you currently paying Thumbtack or Angi for leads, and if so, do you ever get the feeling those leads are going to four other guys at the same time?"

3. Discovery

1. "How are most jobs coming in — referrals, platforms like Thumbtack, or Google?"
2. "What's your average job size, and how many do you run in a typical week?"
3. "What kind of work do you turn down? Drywall, plumbing rough-in, structural — knowing what you don't do is half the website."

4. Value pitch — handyman-specific

1. **"Send a photo, get a quote" form** — homeowner texts a photo, you reply with ballpark pricing. Filters out tire-kickers and books real jobs faster.
2. **Service list with rough pricing** — TV mounting from \$X, ceiling fan install from \$Y, etc. Sets expectations before they call.
3. **Coverage area map** — show the towns you'll travel to. "Within 20 minutes of Clarks Summit." Stops the "are you local?" call.
4. **Review aggregation** — your Google + Thumbtack + Angi reviews pulled together. Trust is the entire game in handyman.
5. **Booking calendar** — let customers self-book a time slot for non-urgent work. Fewer phone-tag rounds.
6. **Branded follow-ups** — automatic "how was the job?" text 24 hours after work, with a one-tap review link.

5. Pricing & CTA

YOU

"Best thing is for me to share my screen for 10 minutes — I'll have something built for [their company] showing the photo-quote flow, your service area, and your reviews pulled together. Tuesday or Wednesday?"

6. Handyman-specific objections

THEY SAY	YOU SAY
"Thumbtack works fine for me."	"Most guys feel that way until they do the math. How many leads a month, average price per lead, close rate? When you back into cost-per-closed-job, it's usually eye-opening."
"I'm just one guy, I don't need a real website."	"That's actually exactly why you do. Solo guys lose to bigger crews when the customer Googles them. Your site is the equalizer — it makes you look professional without you needing employees."
"My customers are word-of-mouth."	"Best channel there is. The site doesn't replace referrals; it converts them. When someone mentions you, the next thing they do is Google you. Make sure what they find closes the deal."
"I don't have time for a website."	"Get that. Build is on us — you give us photos and a list of services, we do the rest. Once it's up, you check it once a week."

7. After the call

- ☐ If booked → calendar invite within 5 minutes, mark **Qualified**
- ☐ If LVM → use the Voicemail Script doc, mark **LVM**, send Email Follow-up
- ☐ If "not interested" → polite exit, mark **Lost**
- ☐ If "remove me" → mark **Do Not Call** immediately, no follow-up

For pricing, "send me an email," and other generic pushback, see the **Objection Handling Library**.
