Sales Script — Welding & Metal Fabrication

V1.0 · FOR PA-REGION WELDERS & METAL FABRICATORS

Why this market

Welding is a B2B-heavy trade — most jobs come from contractors, manufacturers, and farm/equipment owners, not residential consumers. The pitch is different from consumer trades: **certifications, capabilities, equipment, and turnaround** are what buyers research. Most welder websites are 1-page brochures from 2010 that say "we weld." That's the gap.

3+ AWS

certifications typical for commercial work — visibility wins commercial accounts

B2B

primary buyer — contractors, plant managers, farm equipment owners

1. Pre-call research

- ☐ Their site — does it list AWS / ASME certifications? Equipment specs?
- ☐ What welding processes? MIG / TIG / stick / aluminum / stainless?
- ☐ Mobile rig or shop-only? Different pitch.
- ☐ Do they have a fab shop or pure repair?

2. Opening

Required identification (TCPA): the first thing out of your mouth on every call must be your name, that you are calling from NEPA-PRO LLC, and the purpose of the call. Failure to identify violates federal law.

YOU

"Hi, this is **[your first name]** from **NEPA-PRO** — we're a veteran-owned shop in Clarks Summit. I'm calling because we built a website platform specifically for welders and metal fabricators in PA. Quick question: when a plant manager or general contractor is searching for a TIG welder with stainless capability, does your current site even tell them whether you can handle it?"

3. Discovery

1. "What's your typical buyer — contractor, manufacturer, farm/equipment, residential?"
2. "What certifications do you hold, and are they visible to a customer Googling you?"
3. "What's the breakdown — repair work, fab shop, mobile rig calls?"

4. Value pitch — welder-specific

- 1. **Capability matrix** — table of processes (MIG/TIG/stick/aluminum/stainless), thicknesses, lengths, certifications. Plant managers scan it in 5 seconds and decide if you're a fit.
- 2. **Certifications front-and-center** — AWS, ASME, code-stamp work. Visibility matters for commercial bids more than any other lever.
- 3. **Project portfolio** — past jobs by type (structural, equipment repair, custom fab, ornamental). Photos with brief descriptions of process used.
- 4. **Mobile rig service area** — if you have a mobile setup, map of how far you'll travel. Big differentiator for emergency equipment repair.
- 5. **Quote request form** — drawing/photo upload, material specs, quantity, deadline. Filters serious B2B inquiries.
- 6. **Equipment list** — what's in the shop. Sounds like overkill, but contractors specifically search for "shop with [machine]."

5. Pricing & CTA

YOU

"Best thing is for me to share my screen for 15 minutes — I'll have a capability matrix and portfolio template built for [their shop] specifically. Tuesday or Thursday this week?"

6. Welder-specific objections

THEY SAY	YOU SAY
"My customers come from word-of-mouth in the industry."	"Best channel — and we don't replace it. When a plant buyer hears about you, they look you up before procurement signs off. Your site is the deciding factor at that step, not the lead source."
"I'm too small for commercial accounts."	"Your size means lower overhead. Many smaller commercial buyers prefer that. The site is what makes you findable for the size of work you actually want."
"My phone never stops, I don't need leads."	"Then this isn't lead-gen. It's about better-quality jobs — the form filters quote requests so you only respond to ones that fit your shop."
"Welding isn't googled."	"It is by procurement and facility managers. Different searcher than residential. They search for exact processes — 'aluminum TIG stainless food-grade' — and find shops that surface those terms specifically."

7. After the call

- ☐ If booked → calendar invite within 5 minutes, mark **Qualified**
- ☐ If LVM → use the Voicemail Script doc, mark **LVM**, send Email Follow-up
- ☐ If "not interested" → polite exit, mark **Lost**
- ☐ If "remove me" → mark **Do Not Call** immediately, no follow-up

For pricing, "send me an email," and other generic pushback, see the **Objection Handling Library**.
