Discovery Call Framework

V1.0 · FOR THE 10–15 MINUTE ZOOM YOU JUST BOOKED

What this doc is for: the cold call's job is to book the discovery. The discovery's job is to qualify the lead, demonstrate value, and book the proposal. This is the playbook for that middle step. Run it tight, finish on time, leave them wanting more.

Before the call (10 min prep)

- ☐ Pull up their existing website (or Google Business Profile if no site)
- ☐ Take 2 phone screenshots: their current mobile experience + a competitor's good one
- ☐ Review the relevant industry sales script — refresh the 2–3 most relevant value props
- ☐ Have your calendar open in another tab — proposal slot ready to offer
- ☐ Test your screenshare. Test your mic. Be the host.

The arc — 10 minutes, six segments

TIME	SEGMENT	GOAL
0–1 min	Warm-up	Confirm time, set agenda, get permission
1–4 min	Discovery deepening	Three follow-ups to the cold-call answers
4–7 min	Show-and-tell	Their site vs. a great-looking peer
7–9 min	Recommendation	What you'd build, in their words
9–10 min	Book the next step	Calendar a proposal walkthrough
+5 min buffer	Their questions	Don't pitch through them

Segment scripts

0–1: Warm-up

YOU "Hey [name], thanks for the time. Quick map of the next 10 minutes: I'm going to ask three follow-up questions to what we talked about, then share my screen for a couple minutes to show you specifically what I'd build for [business name], and we'll wrap by figuring out if next steps make sense. Sound good?"

1–4: Discovery deepening

Three open questions only. Listen 80%, talk 20%.

1. **"Walk me through what happens today when [their pain point] comes in — start to finish."**
2. **"If we fixed that, what's the one thing you'd want it to do that nothing on the market currently does?"**
3. **"Who else needs to be on board with a decision like this?"**

Listen for: who actually decides, what their budget reflex is, and what timing pressure exists. These three pieces decide whether the proposal lands.

4–7: Show-and-tell

Share screen. Pull up their existing site (or competitor's GBP if they have nothing). Don't trash it — narrate what you see, with empathy.

YOU "Here's what I see when I'm a homeowner finding you for the first time. Loading time... [count seconds]. First impression... [what's there]. Phone number... [hard to find / missing]. Service area... [unclear]. Now let me show you a [their industry] in [different city] who's doing it well — see how this lands different?"

7–9: Recommendation

Tell them what you'd build, using *their* words from the discovery.

YOU "Based on what you just told me, here's what I'd recommend specifically for [business name]: [feature 1 tied to pain 1], [feature 2 tied to pain 2], and [feature 3 they wished existed]. We'd build a site and an installable app together — about a 3-week build, give or take depending on content."

9–10: Book the next step

YOU "Best next step is I prep a real proposal — pricing, mockups, timeline, all of it. Takes me about a day. Want to grab 20 minutes early next week to walk through it together? Tuesday or Wednesday?"

After the call

- ☐ If proposal booked → calendar invite within 5 minutes, mark **Qualified** in the dialer
- ☐ If they want to think → "Totally fair. Mind if I send a one-pager so you have it in writing?" Send within an hour, mark **Spoke**
- ☐ If clearly not a fit → polite exit, mark **Lost** with reason "not a fit (post-discovery)"
- ☐ Either way: log notes in their contact record while it's fresh

Common discovery-call mistakes

1. **Pitching through their concerns.** If they raise a worry, address it before continuing. Skipping a concern doesn't make it go away — it makes them politely lie at the end.
2. **Going over time.** If you said 10 minutes, end at 10. They'll respect you, and the proposal call will get booked.
3. **Quoting on the call.** Without a real proposal, every number you say becomes the price they remember. Quote on paper, not verbally.
4. **Demoing features they don't care about.** Show only what addresses what they told you in segment 2. Restraint is the demo.
